VOLUME CONTENTS

Number 1

Y. S. TARNG and Y. Y. SHYUR	1	Identification of radial depth of cut in numerical control pocketing routines
S. OKUYAMA, Y. NAKAMURA and S. KAWAMURA	13	Cooling action of grinding fluid in shallow grinding
P. MAKRIS and M. SFANTSIKOPOULOS	25	Machine serving principle evaluated by necessary part transport speed
Z. C. LIN and S. Y. LIN	31	An investigation of ductile fracturing in mild steel during upsetting
M. S. JOUN and S. M. HWANG	51	Optimal process design in steady-state metal forming by finite element method—I. Theoretical considerations
M. S. JOUN and S. M. HWANG	63	Optimal process design in steady-state metal forming by finite element method—II. Application to die profile design in extrusion
A. KARIMI TAHERI	71	Analytical study of drawing of non-bonded trimetallic strips
Y. L. YAO and X. D. FANG	89	Assessment of chip forming patterns with tool wear progression in machining via neural networks
S. RAVI TEJA and T. JAYASINGH	103	Characterisation of ground surface profiles—a comparison of AR, MA and ARMA modelling methods
ANNOUNCEMENT	111	

Number 2

W.L. R. IP and M. LOFTUS	115	The application of an inclined end mill machining strategy on 3-axis machining centres
Y. T. LIN and J. P. WANG	135	A new upper-bound elemental technique approach to axisymmetric metal forming processes
R. SHIVPURI and E. ERUÇ	153	Planning and simulation of the ring rolling process for improved productivity
S. YOSSIFON and R. SHIVPURI	175	Analysis and comparison of selected rotary linkage drives for mechanical presses
S. YOSSIFON and R. SHIVPURI	193	Optimization of a double knuckle linkage drive with constant mechanical advantage for mechanical presses
S. YOSSIFON and R. SHIVPURI	209	Design considerations for the electric servo-motor driven 30 ton double knuckle press for precision forming
A. H. MEMON	223	Strip drawing experiments with a die-less reduction unit using polymer of "EVA" as the pressure medium
Y. GAO and B. JONES	231	Control of the traverse grinding process using dynamically active workpiece steadies
L. C. ZHANG, T. SUTO, H. NOGUCHI and T. WAIDA	245	Applied mechanics in grinding part II: modelling of elastic modulus of wheels and interface forces
S. Y. LUO and Y. S. LIAO	257	Effects of diamond grain characteristics on sawblade wear
CHOONGGUN SIM and MINYANG YANG	267	The prediction of the cutting force in ball-end milling with a flexible cutter
R. KOMANDURI and S. NANDYAL	285	Low-pressure synthesis of polycrystalline diamond abrasive
M. S. CHUA, M. RAHMAN, Y. S. WONG and H. T. LOH	297	Determination of optimal cutting conditions using design of experiments and optimization techniques

Number 3

B.-G. Rosén — 307 Representation of three-dimensional surface topography in CAD-systems and image-processing software

J. S. Agapiou — 321 Design characteristics of new types of drill and evaluation of their performance drilling cast iron—I. Drill with four major cutting edges

J. S. Agapiou — 343 Design characteristics of new types of drill and evaluation of their performance drilling cast iron—II. Drills with three major cutting edges

X. P. Fu and T. A. Dean — 367 Past developments, current applications and trends in the cross wedge rolling process

N. Sirilertworakul, P. D. Webster and T. A. Dean — 401 A knowledge base for alloy and process selection for casting

V. Kiridena and P. M. Ferreira — 417 Mapping the effects of positioning errors on the volumetric accuracy of five-axis CNC machine tools

W. B. Lee and M. Zhou — 439 A theoretical analysis of the effect of crystallographic orientation on chip formation in micromachining

Shiuh-Jer Huang and Cheng-Fa Lee — 449 Servo-drive systems for milling machine retrofit application

M. H. Parsa, K. Yamaguchi and N. Takakura — 465 Increase in limiting drawing ratio by using partially thickened blanks

P. V. Rao, B. Ramamoorthy and V. Radhakrishnan — 475 Effect of plating and temperature on the strength of shrink fitted assemblies

C. L. Hwang — 483 Adaptive turning force control with optimal robustness and constrained feed rate

M. Komaraiah and P. N. Reddy — 495 A study on the influence of workpiece properties in ultrasonic machining

Jih-Hua Chin and Jang-Shyong Wu — 507 Mathematical models and experiments for chip signals of single-edge deep hole drilling

Announcement — 521

Number 4

T. A. Dean — 523 Editorial

G. Galante, A. Lombardo and M. Piacentini — 525 Fractal dimension: a useful tool to describe the microgeometry of machined surfaces

I. N. Tansel and C. McLaughlin — 531 Detection of tool breakage in milling operations—I. The time series analysis approach

I. N. Tansel and C. McLaughlin — 545 Detection of tool breakage in milling operations—II. The neural network approach

I. N. Tansel, C. Mekdeci, O. Rodriguez and B. Uragun — 559 Monitoring drill conditions with wavelet based encoding and neural networks

A. de Matos Dias and L. Schaeffer — 577 Theoretical and experimental analysis of plasticity equations for porous metals

L. C. Zhang, T. Suto, H. Noguchi and T. Waida — 587 Applied mechanics in grinding—III. A new formula for contact length prediction and a comparison of available models

W. König, J. A. Fan and D. Seibert — 599 Recent developments in the extrusion of helical gears

V. Simon — 615 Hob for worm gear manufacturing with circular profile

G. Yucesan, Qufei Xie and A. E. Bayoumi — 627 Determination of process parameters through a mechanistic force model of milling operations

Y. S. Tarng and S. T. Cheng — 643 Fuzzy control of feed rate in end milling operations

Number 5

H. S. Kim and K. F. Ehmann — 651 A cutting force model for face milling operations

P. D. Lin and K. F. Ehmann — 675 Direct volumetric error evaluation for multi-axis machines

Shiuh-Jer Huang and Mu-Tyan Yan — 695 Theoretical and experimental study of PI control, adaptive control and variable structure control for converted traditional milling machines

M. S. Joun and S. M. Hwang — 713 Pass schedule optimal design in multi-pass extrusion and drawing by finite element method

Been-Der Yang and Chia-Hsiang Menq — 725 Compensation for form error of end-milled sculptured surfaces using discrete measurement data

D. T. Pham and K. Hafeez — 741 A new technique for determining the location of 3-D objects using a transputer-controlled inertial sensor

Number 6

R. Balendra — 753 Injection-chamber to die-cavity interface for injection forming

Y. S. Tarng and Y. S. Wang — 761 An adaptive fuzzy control system for turning operations

H. Pahk and J. Kim — 773 Development of computer integrated system for error diagnosis of a CMM using calibrated mechanical artefacts

Tsu-Chin Tsao, M. W. McCarthy and S. G. Kapoor — 791 A new approach to stability analysis of variable speed machining systems

A. K. Srivastava, D. B. Rogers and M. A. Elbestawi — 809 Optimal planning of an adaptively controlled robotic disk grinding process

S. D. J. A. Arsecularatne, G. Barrow and S. Hinduja — 827 Prediction of the radial force in turning using feed force data

N. H. Loh, S. C. Tam and S. Miyazawa — 841 Application of experimental design in ball burnishing

Call for Papers — 853

Title Section, Volume Contents and Author Index — I
